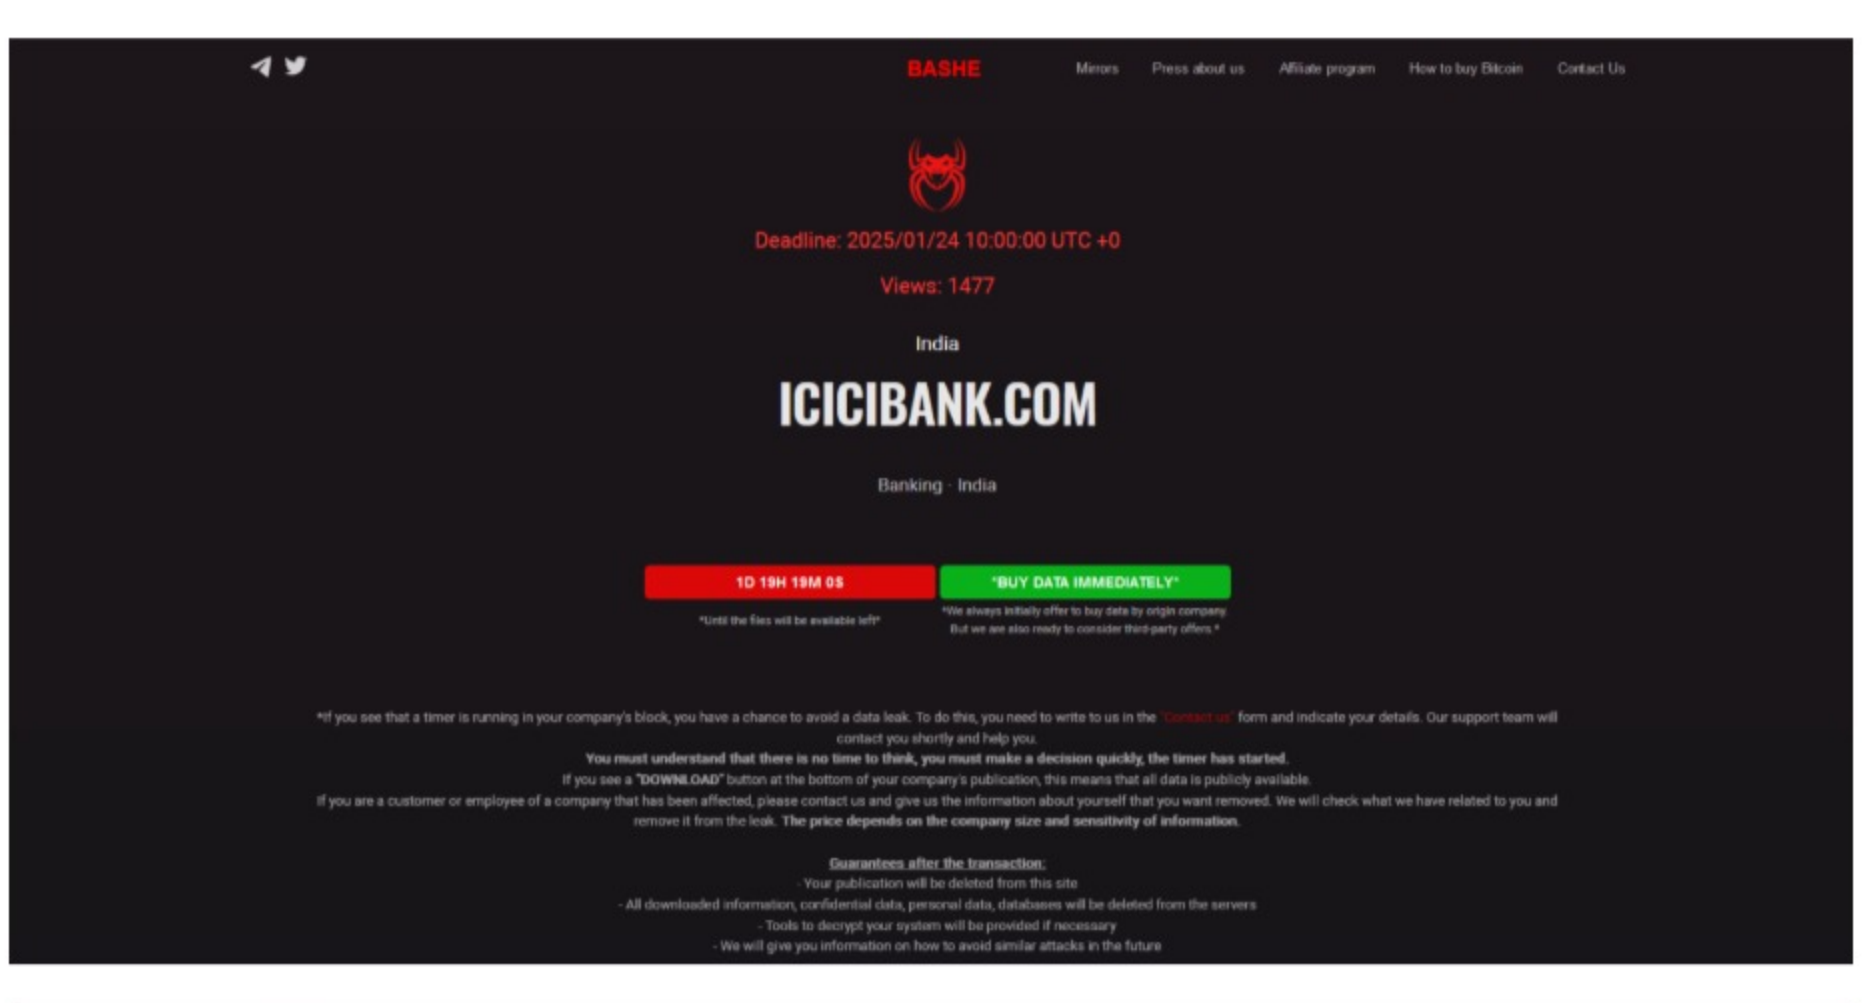
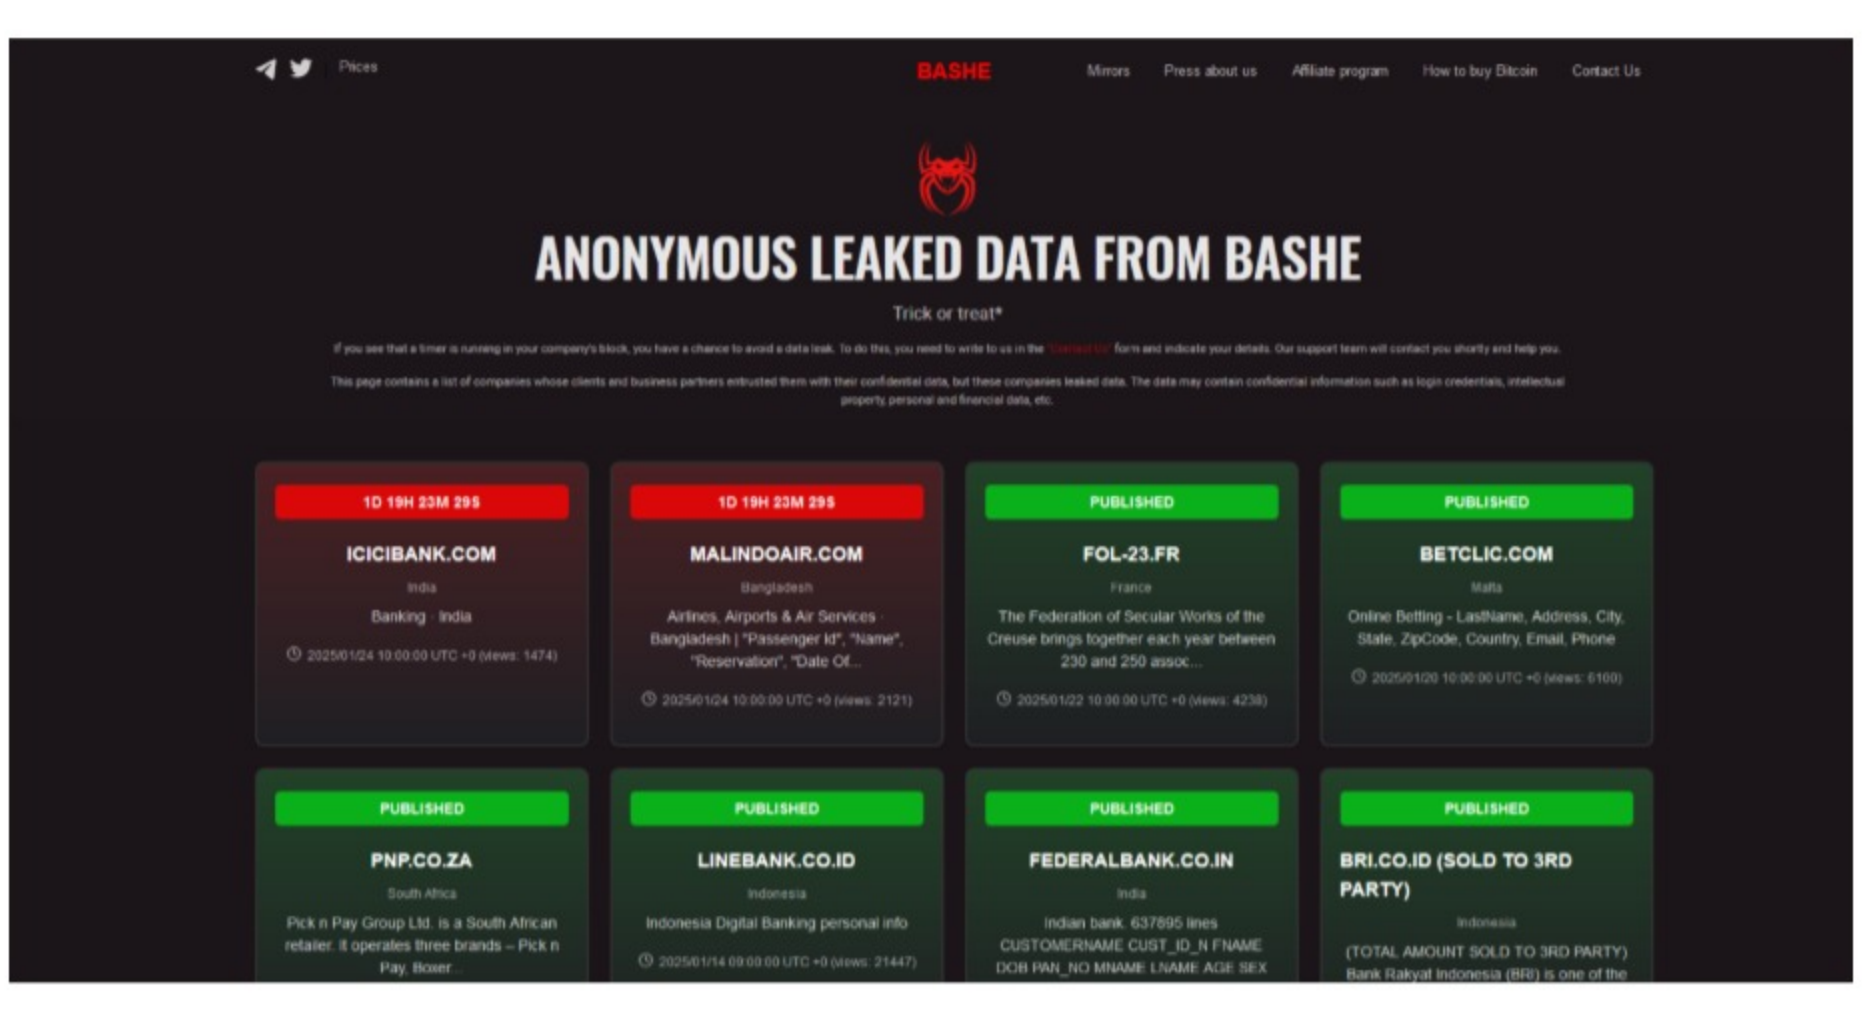
ICICI BANK DATA IS LEAKED BY THE RANSOMWARE GROUP BASHE

Leave a Comment / By Dipanshu Kumar / January 22, 2025

Hackingblogs Alert: *Users are warned in this article that their personal information regarding ICICI Banks has been compromised.A ransomware group called Bashe made the data public, and they have set a deadline of January 25, 2025, unless the demands are fulfilled.*





> ***You must understand that there is no time to think, you must make a decision quickly, the timer has started.*** *If you see a **"DOWNLOAD"** button at the bottom of your company's publication, this means that all data is publicly available.. If you are a customer or employee of a company that has been affected, please contact us and give us the information about yourself that you want removed. We will check what we have related to you and remove it from the leak.* ***The price depends on the company size and sensitivity of information.***

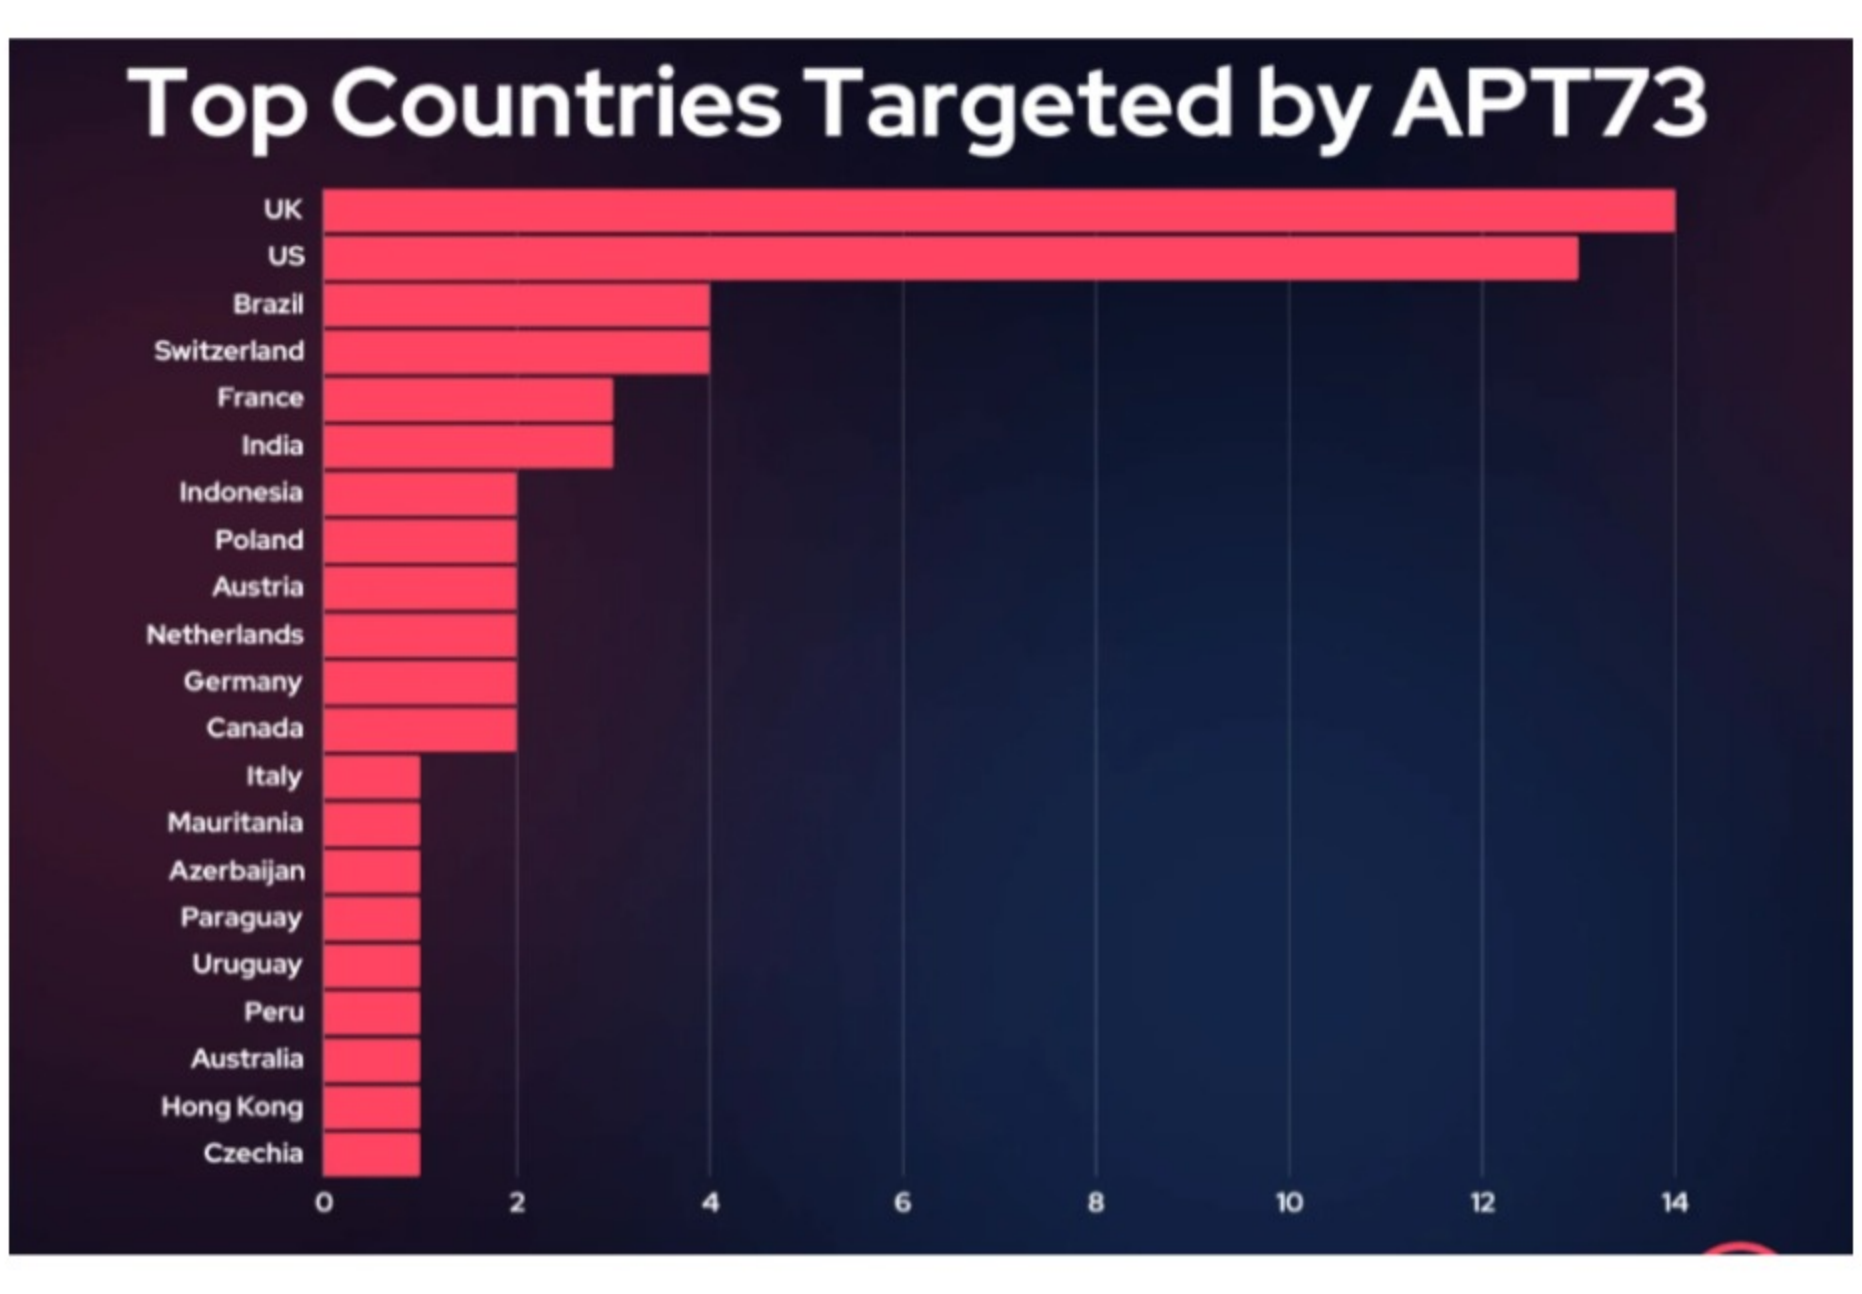
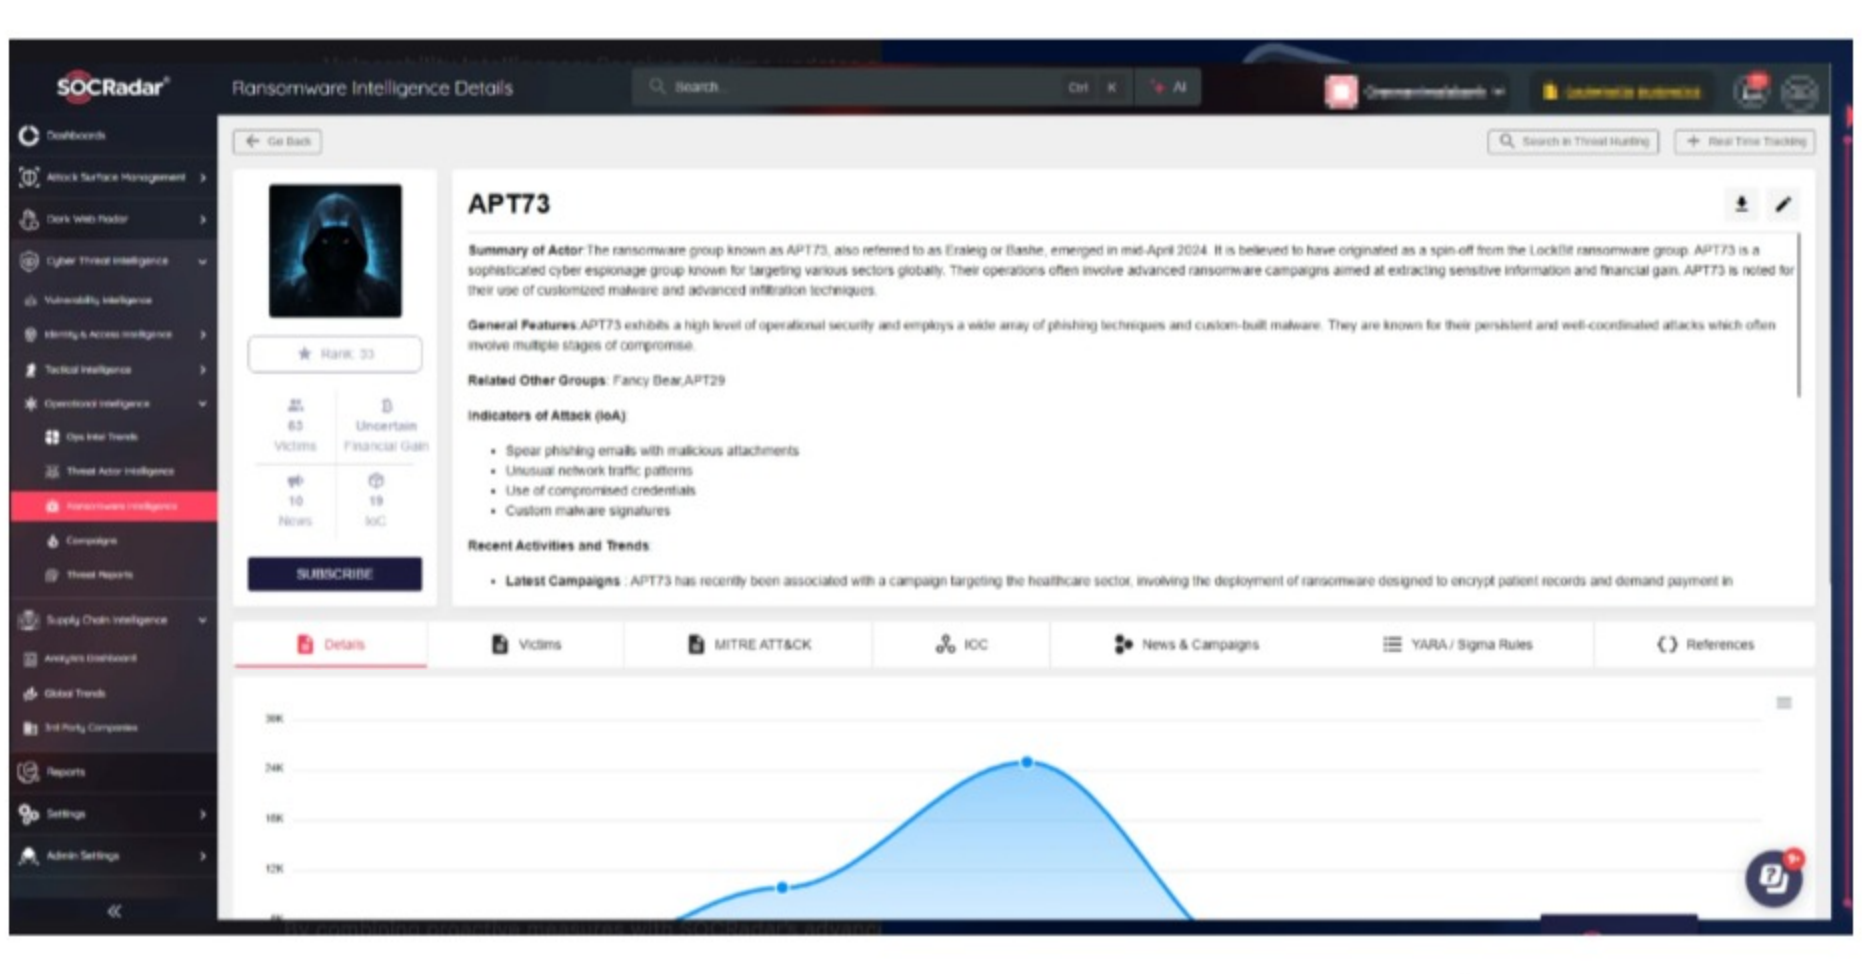
About The Threat Actor : Bashe

In **April 2024, the new ransomware group Bashe** which is associated with **LockBit**—arose. Bashe targets **high-value businesses including banking, technology, healthcare, and logistics in nations** like the **US, UK, France, Germany, India, and Australia** by using **Tor networks with infrastructure situated in the Czech Republic.** Their **sophisticated strategies and infrastructure are designed to optimise ransom demands** resulting from breaches of sensitive data.



Previously known as APT73 or Eraleig, the group changed their name with new domains after a few months.



The **Bashe ransomware group reportedly targeted Bank Rakyat Indonesia (BRI) on December 18, 2024.** In spite of this, Arga M. Nugraha, Director of Digital and IT at BRI, guaranteed that all **banking services, including digital platforms like BRImo and ATMs, would continue to operate properly and that client data and funds would remain secure.**

Apart from this the bashe onion site has seperate section on "How To Buy Bitcoin". The mode of transactions can be made by multiple ways. Not Sure If this is legitimate afterall it comes from a ransomware group.
